Charge Behavior And

Interactions

How do electrical

charges interact? There

are only two kinds of

electrical charge:

negative (-) and positive

(+). Opposite charges

attract one another, and

Online Library

Electric Charge

like charges repel. In addition, the closer the charges are together, the greater the force of attraction or repulsion.

How do electrical charges interact?

Electric Charge Behavior and

Interactions Model 1.

The electrical force is a result of charge •

Electric charge is a

Online Library

Electric Charge

fundamental property of matter, just like mass, although some particles have no charge. •

Electric charge is conserved; it cannot be created or destroyed. •

Because electric charge moves with particles, charges can be treated like particles.

Electric Charge

Interactions Model

These two types of electrical charges - positive and negative - are said to be opposite types of charge. And consistent with our fundamental principle of charge interaction, a positively charged object will attract a negatively charged object.

Oppositely charged objects will exert an

Worksheet 4: Electric Fields. The electric field is the amount of electric force per Coulomb of charge, $E = F_e/q$. Once the electric field from one or more source charges is known, the force on any charge placed within the field can be determined by the calculation $F_e = E \cdot q$.
