For example, the method `charAt ()` returns the individual character in the String at a given index. Note that Strings are just like arrays in that the first character is index #0! `String message = "some text here."; char c = message.charAt (3); println (c); // Results in 'e'. Another useful method is length ().`

~~Strings and Drawing Text \ Processing.org~~

`text ()` Draws text to the screen. Displays the information specified in the first parameter on the screen in the position specified by the additional parameters. A default font will be used unless a font is set with the `textFont ()` function and a default size will be used unless a font is set with `textSize ()`.
