~~Overview: Tri~~

~~Triangles,~~

The classic trigonometry problem is to specify three of these six characteristics and find the other three. Of course, our calculator solves triangles

Bookmark File

PDF Tri

Triangles
from any
combinations of
main and derived
properties such

as area,
perimeter,
heights,
medians, etc.

Usually by the
length of three
sides (SSS) or
side-angle-side
or angle-side-
angle .

Triangles

~~Triangle
calculator~~

Step 5: Consider whether you need to create right triangles by drawing extra lines. For example, divide an isosceles triangle into two congruent right triangles.

Bookmark File

PDF Tri

Step 6: Decide whether you will need the Pythagorean theorem, sine, cosine or tangent. Step 7: Check that your answer is reasonable. The hypotenuse is the longest side in a right triangle.

~~Solutions~~

This problems involves 1 small twist. You must

decide which of the 3 bases to use. Just

remember that base and height are

perpendicular.

Therefore, the base is '11' since it is

Bookmark File

PDF Tri

perpendicular to the height of 13.4. To find the area of the triangle on the left, substitute the base and the height into the formula for area.
